mcl	10	2000	1300	4000	1000	15	150	2	100	10	9000	500

Contaminants in light gray boxes are measured in micrograms per liter (µg/L). Contaminants in dark gray boxes are measured in milligrams per liter (mg/L).
 For simplicity, only one sample of lead and copper is given per water system. Multiple samples are usually taken from several different locations within each water system. Since the concentration levels vary according to location, we encourage you to visit the Illinois EPA website to determine lead and copper levels nearest your home. All records were compiled from the Illinois EPA Drinking Water Watch.

This form made available by Aquality Solutions® specifically for use with their Water Report Card and may not be republished without Aquality Solutions' consent.
